

- Desktop, Cloud, Excel
- A single view of a report
- Dashboard is for viewing, reports are for editing
- Pictures and graphs used in reports
- DAX is a formula language like Excel but stronger
- A column added using DAX expressions
- It helps clean and prepare data
- They connect tables like keys in databases
- It's the place where dashboards are hosted
- Yes, through database connectors
- Security that hides data for certain users
- You press refresh or set auto-refresh
- Import stores data, DirectQuery accesses live
- Used to filter visuals and save states
- Yes, but you can't publish
- DAX is more advanced and faster than Excel
- Only Pro users can schedule refreshes
- Like levels in a category
- You upload it from Desktop to the cloud
- They are pre-set color and design styles
- Modeling how data connects
- Going from one page to another with filter context
- Lets you type a question and get a visual
- Yes, if shared with the public or licensed users
- The logic and metadata layer
- Filters help show only what's needed
- Highlights and filters other visuals
- By using fewer visuals and optimizing DAX
- Premium gives you faster dashboards and bigger models
- Yes, but advanced features cost money
